

THE BISHOP'S CO-ED SCHOOL, UNDRI REPORT ON TEACHERS' TRAINING

UNDERSTANDING THE COMPETENCY FRAMEWORK OF CURRICULUM PLANNING

"Education is the most powerful weapon which you can use to change the world."

Competency based education and personalised learning go hand in hand. An interesting and enriching webinar training session was conducted by M/s Aditya Birla Academy for our teachers on 13th July, 2024. The educator Mr. Rajan Kumar threw light on the importance of curriculum planning and competency based education. He emphasised the importance of personalizing the learning experience for each individual student. The educator re-emphasised the need to evaluate the competencies of the students based on understanding the key concepts and the ability to apply knowledge to real life situations. The usage of formative and summative assessments will bridge the gap between academic and real-world application which will prepare our students for a rapidly changing world.

The educator stressed that the competency based education is an outcome based approach to education to ensure proficiency in learning by students through demonstration of the knowledge, skills, values and attitudes required for dealing with real life situations at the age and grade appropriate level. The teacher plays a pivotal role on the learning outcomes in the competency based education where hands-on training is the main goal. The students need to be given support individually and master the subject and the inherent skills.

The assessments must be more creative and more meaningful. Hands-on-experience aim to develop "higher order thinking skills" among students. By building a well-informed research based system, competency based education can succeed. The importance to create equity and an inclusive culture among students is required. Formative assessments help teachers in guiding the students to achieve learning as per the objectives. The pedagogical processes facilitates collaborative learning in the classroom and provides students to connect and apply their theoretical understanding, builds interest and motivates students to engage in active learning tasks. The amalgamation of factual knowledge and skill are the key outputs in implementing the competency based education where each student is given equal opportunity to master the necessary skills and become successful.
