

## CAMPUS VISIT TO MIT-WORLD PEACE UNIVERSITY

*"The best way to predict the future is to create it."*

It is in keeping with the spirit of these words that the 2022-23 Batch of the Bishops' Junior College was invited to visit the campus of the Maharashtra Institute of Technology World Peace University on the 27th of August, 2022.

The primary purpose of this visit was to prepare the students of Junior College for their departure into the world, to broaden their horizons, and to provide a learning opportunity for students to discover new areas of interest and study.

On the day of the visit, students first assembled on the grounds of Junior College, attending their first class of the day before piling into buses, separated streamwise,

playing music and talking animatedly on their hour-long journey to the campus, located in the Kothrud Area of Pune.

Upon arrival, the students were greeted by a representative of the university, and they took a moment to admire the expansive campus

of the MIT-WPU, before being taken to various lecture halls based on their stream – Science, Commerce and Arts, respectively.

Within the lecture halls, students were greeted by faculty of the university that taught subjects relevant to the students' particular streams.

The students of the science stream made acquaintances with the professors of Mathematics, Chemistry, Physics, Engineering, Pharmacology and Biology. The Arts stream met professors of Mass Media, Hospitality, Law, Photography and Liberal Arts, while the Commerce stream was addressed by professors of Commerce, Economics, Public Policy and Business Administration.

Each professor spoke about the opportunities available to students if they pursued their subject, the unique structure and assets of the MIT-WPU education framework, and the various benefits students would receive by applying to the college.

Following this, after a short snack break, the students of the Science stream were taken on a tour of the well-equipped laboratories on campus; the Deep Sea Lab which facilitated the studies of aspiring petroleum engineers by simulating the conditions of

undersea petroleum extraction, and an engineers workshop, which provided a workspace for students to create prototypes of their unique designs.

Meanwhile, the remaining students took in the sights and sounds of the campus, purchasing treats from the stalls within the campus, run by the college students themselves.

The trip ended on a high note, with the students of Junior College returning to their buses and discussing the various ideas they were introduced to, that day.

The visit to the campus of MIT-WPU was successful, enlightening and fruitful for all.
