

Thank you for the music, Sir.

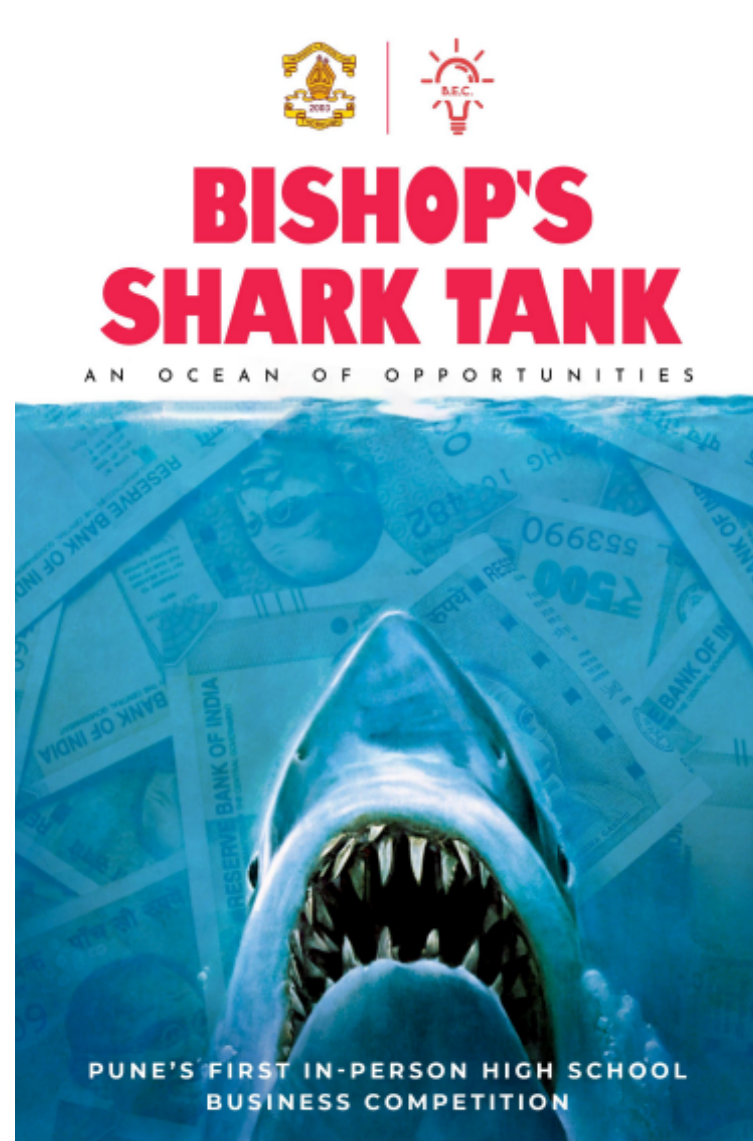

An irreparable loss. Around a month ago on the 20th of January, 2023, the school lost its beloved music teacher, Mr. Melvin John. This tragic news has left us shocked and saddened, and has created a vacuum that is almost impossible to fill. As students, we carry with us our fond memories of the unforgettable music periods we had with Mr. Melvin John. Mr. Melvin John touched the lives of every student at school. His warmth and love are truly irreplaceable. Mr. John will forever have a special place in all our hearts. He has left an indelible mark on the school, its staff and students.

Whenever we hear the piano, we will only ever think of Mr. Melvin John. Thank you for the music, Sir.

THE BEGINNING OF B.E.C

It all began with Ronak Samuel, our Head Boy, who saw an easy yet excellent opportunity to show pupils a significantly underestimated area of business in a fresh perspective—a Business and entrepreneurship club commonly referred to as B.E.C. Up until today, the B.E.C. team has successfully conducted multiple events, such as a seminar, group mixer, and presentation competition. The "Bishop's Shark Tank," BEC's most recent and most thrilling event, was held on December 16 at the Bishop's Kalyani Nagar. When asked how he recruited the B.E.C. members, Ronak replied, "You pick people you can trust and get along with, and you'll find yourself with the perfect team who push your thinking and help you advance with new ideas." He continued by emphasizing how none of this would have been possible without the assistance of his other team members, including Nikash Dhake, Avantika Bhandari, Reeva Jhavar, Rajveer Pathak, and Harshit Nimani. Reeva, who presently oversees the infographics at BEC and aims to grow them in terms of quality and not simply quantity, was also mentioned as the organization's future leader. She also discusses adding a more diverse teaching program to the organization rather than focusing on competitiveness to bring about a feeling of balance.

IMAGICA - A magical time

Our journey begins at 7 a.m. at Bishop's Kalyaninagar School, filled with the excitement of over 300 students anxious to see India's largest theme park.

The school-organized journey was made exceptionally comfortable for pupils by a constant supply of appetizing food items such as burgers, cakes, and juices. The bus arrived on schedule, and by 10 a.m., all of the students were dispersed across Imagica to enjoy the theme park in its entirety. The most crowded lines were visible in the queue of Nitro (India's fastest rollercoaster) and the Scream Machine, which gradually acquires momentum by swinging and then gains immediate speed by spinning at 180° while hovering roughly 148 meters above ground level. Many other rides, such as I - for India, Mr. India, Salimgarh, and Alibaba aur chalis chorr, mixed many sensations of excitement, terror, culture, and bollywood into one and appealed more to the riders' emotional side. Aside from that, one of Imagica's most popular rides was its massive indoor rollercoaster, Deep Space, which was themed around outer space and galaxies. However, by 1pm, the children's attention had turned from rollercoasters to the park's most popular water attraction, the Rajasaurus, which was quickly followed by a flavourful feast of pav bhaji and manchurian rice. In the end, everybody had enjoyed to their fullest and had a gala time.

sent in advance
and announcements
will also be made*

*Reporters: Class 5 to 12
Editors: Class 10 to 12
Designers: Class 9 to 12*

“She perfectly combined education and fun”

Mrs. Snehlata Keshav Shelar conducted a workshop for class 10th on Electromagnetism Current Electricity. Mrs. Mau gave her views about the workshop saying that topics like current electricity and electromagnetism require practical demonstrations for better understanding by the students. Mrs. Kavita describes the workshop as beneficial for the students as she practically explains the topics studied in class. The children gave their feedback saying, “The practical demonstrations made physics fun and cleared concepts”. Mrs. Snehlata explained current electricity and electromagnetism through her self-made instruments and displayed devices such as voltmeter, MCB and transformer. Her enthusiasm for teaching children with a practical approach was appreciated by all students and teachers.
